

HOW TO USE E-DOCS

From the [MAIN](#) screen, click on the [INSTALL GUIDE](#), [REFERENCE CARD](#) or [MANUAL](#) buttons to see a **Table of Contents** for that document. Click on a topic name to go to that section of the document.

You can use buttons [Within the Page](#) and on the [Acrobat Toolbar](#) to maneuver through the document.

Within the Page

Red, underlined text takes you to a related section for more info.

Red frames are picture links to other sections.

Blue arrows signal that the topic continues on the next page.

Green arrows return you to the previous page in a topic.

Blue or **Green** text buttons go to the first page of a topic.

Yellow buttons take you to the *ATF* E-Docs Main Screen.

Acrobat Toolbar

Arrow buttons on top of each page also help you maneuver:

Zoom out or **zoom in** to change page magnification.

Zoom to **100%**, **Fit Page** in view, or **Fit Page Width**.

Search to find text within a document (in *Windows*).

Click the **bookmark** icon to display bookmarks to the left of each page. Click on a topic to view that section.

Click the **triangle** next to a bookmark to expand the list of headings (displaying subheadings).

In a Hurry?

Choose Activity

Viewing

Open Documents. Links often open other documents in addition to the one you're viewing. If you get lost as to which document you are viewing, use the [WINDOW](#) menu to select a different document.

You shouldn't keep too many documents open at once – each one takes up memory. Choose the [FILE](#) menu, then [CLOSE](#) to exit documents you are no longer viewing. (MAIN.PDF is the only document file you should always keep open.)

DOS Reader. If you're using the DOS reader and the graphics look jagged, select [256 COLORS](#) (open the [EDIT](#) menu and select [PREFERENCES](#)).

Printing

You can print out pages for reference. (Choose the [FILE](#) menu, then [PRINT](#).) Some printers support “2 Up” and “Landscape” options. Use them to print two Acrobat pages per sheet of paper. If you have a [PRINT COLORS AS GRAYS](#) option, select it as well.
