

# Monitor II 3.0

## M Alarm Monitoring, Receiving and Forwarding Software

*Turn your PC into a powerful Central Station Receiver with Monitor II Software.*

## Benefits

### ■ All-In-One Central Station Software

The Monitor II Software product family includes modules for alarm receiving, alarm monitoring, remote programming, report faxing and report forwarding to remote stations.

### ■ Your PC Is a Powerful Tool

Because Monitor II is PC based and network compatible, your Central Station can grow from a single PC into a system as large as your business requires.

### ■ Maximize Your PC's Capability

Up to 8 phone lines may be monitored by a single PC. Networked computers share a single database of accounts and client data. Redundancy is built in so that if something ever happens to the database, it can be recovered quickly, easily and with minimum loss of data.

### ■ Account Servicing and Monitoring from the Same System

Since Monitor II will remotely program all C&K control panels, one PC can service accounts and monitor them.

### ■ User-Friendly Point & Click Interface

The Monitor II software program was designed for the Microsoft® Windows™ environment, making it both quick to learn and easy to use.

### ■ Fast and Easy Account Servicing

Once connected to the control panel, it is simple to upload, download and resolve many customer problems without the need for costly, on-site service calls.

### ■ Unlimited Account Capability

The number of accounts that Monitor II is capable of monitoring is limited only by the size of the computer's hard disk and the number of incoming phone lines.

### ■ Software Supports 7 Languages

The software package is available in seven international languages: Taiwan Chinese, Simplified Chinese, Spanish, French Canadian, Italian, and Dutch.

# Monitor II 3.0 Software

## Features and Software Modules

### Multimedia Sounds

Monitor II supports sounds associated with different signal types. The sounds may be defined by the user. Requires SoundBlaster or equivalent soundcard and speakers.

### Event Notification

Different events may be identified by color or sound giving the user greater flexibility in event identification.

### Automatic Archiving

Allows the user to determine when the System Log will be archived, and performs the operation when necessary.

### Automatic/Manual Backup

Allows the user to set up the Account Database, Administrative Database, and/or System Log to be backed up to the specified directory.

### Network Support

The Account Database may be located on a network drive rather than on the same system. This allows systems to share the same Account Database and eliminates the need for duplication of file data.

### Account Sorting

View the Account list sorted by either Name or Account Number.

### Alarm Forwarding

Forward alarm data to a Satellite-II site. The report may also be sent via fax from either Monitor-II or Satellite-II.

### Displays Graphical Floor Plans

Monitor II has the ability to display location floor plans.

### Real Time Alarm Printing

Allows the user to have hard copy of events as they occur.

### Phone Line Validator

The phone lines are checked for dial tone at regular intervals, and if there is a problem, the system alerts you.

### Radionics™ 6000 and ADEMCO® 685 Output Ports

Incoming reports may be routed to larger automation systems using these formats through the com port.

**Items listed below are included with the Monitor II Software Package**

### Monitor II

Alarm receiver designed to monitor all C&K Control Panels using CFSK-III protocol

### Director

Alarm report faxing and forwarding to Satellite II remote stations

### Satellite II

Remote alarm receiver from Monitor II stations and alarm report faxing and forwarding to other Satellite II remote stations

### Security Plug

Required to run Monitor II and receive alarm reports

### Commander II

Remote programmer for all C&K Control Panels. (Does not require Security Plug.)

### Language Modules

Multi-language modules are available upon request.

**For Monitor II upgrades from previous versions, please refer to the ordering information section below.**

## Specifications

### System Requirements

- 80486-33 PC
- Microsoft Windows 3.1, 3.11, or '95
- 6 MB Hard Disk space plus 1 MB per additional language installed
- 8 MB RAM (16 MB recommended for Windows '95)
- VGA Monitor (640 x 480)
- Mouse
- Monitor II Modem (Hayes® Accura 28.8 Kbaud)

### Optional Equipment

- Fax/Modem to send alarm information to other locations
- SoundBlaster compatible soundcard and speakers
- Network card
- Printer, 80 columns
- C&K 9.X PC/P, Telephone cable, Plug to Plug, used to connect computer modem directly to control panel

- C&K 9.X PC/T, Telephone cable, Plug to Spade Lugs, used to connect computer modem directly to control panel.
- DigiBoard™ PC-4 & PC-8 4 or 8 comm port expansion modules. Required to use more than two incoming phone lines. Contact C&K for assistance.
