Laplace strongly believed in causal determinism, which is expressed in the following quote from the introduction to the Essai: "We may regard the present state of the universe as the effect of its past and the cause of its future. An intellect which at a certain moment would know all forces that set nature in motion, and all positions of all items of which nature is composed, if this intellect were also vast enough to submit these data to analysis, it would embrace in a single formula the movements of the greatest bodies of the universe and those of the tiniest atom; for such an intellect nothing would be uncertain and the future just like the past would be present before its eyes." This intellect is often referred to as Laplace's demon (in the same vein as Maxwell's demon). Note that the description of the hypothetical intellect described above by Laplace as a demon does not come from Laplace, but from later biographers: Laplace saw himself as a scientist that hoped that humanity would progress in a better scientific understanding of the world, which, if and when eventually completed, would still need a tremendous calculating power to compute it all in a single instant. While Laplace saw foremost practical problems for mankind to reach this ultimate stage of knowledge and computation, later interpretations of quantum mechanics, which were adopted by philosophers defending the existence of free will, also leave the theoretical possibility of such an "intellect" contested: for a further discussion of this issue, see also: determinism. There has recently been proposed a limit on the computational power of the universe, i.e. the ability of Laplace's Demon to process an infinite amount of information. The limit is based on the maximum entropy of the universe, the speed of light, and the minimum amount of time taken to move information across the Planck length, and the figure turns out to be 2 to the 130 bits. Accordingly, anything that requires more than this amount of data cannot be computed in the amount of time that has lapsed so far in the universe. (An actual theory of everything might find an exception to this limit, of course.)

Raiders Game

The object of this game is to bomb the enemy. It requires that you be able to judge distance and depth. The score indicates who wins with running totals. You can create your own Star Wars Fantasy.

Enter a number from 1-9 and EXE

```
10 VAC
20 FOR L=1 TO 2
30 PRINT "RAIDERS
";
40 NEXT L
50 PRINT "TIME TO
FIRE";
60 Q=0:PRINT " AIM
";
70 INPUT " AT 199"
,Q
103 D=INT (8*RAN#+1
)
104 S=INT (8*RAN#+1
)
105 IF S=0 THEN 167 .
106 IF S=0 THEN 170
107 IF Q<S THEN 182
108 IF Q>D THEN 167
110 IF S<Q:PRINT "I
T'S HIT"
130 IF D=Q THEN 182
166 GOTO 60
167 PRINT "YOU MISS
ED"
168 Q=Q+1
169 GOTO 60
170 PRINT "IT GOT Y
OU"
180 V=V+1
181 GOTO 190
182 PRINT "IT'S BLD
MN":GOTO 183
183 W=W+1
190 PRINT "SCORE...
";
191 PRINT "IT";V;"YOU";W;
200 GOTO 60
```

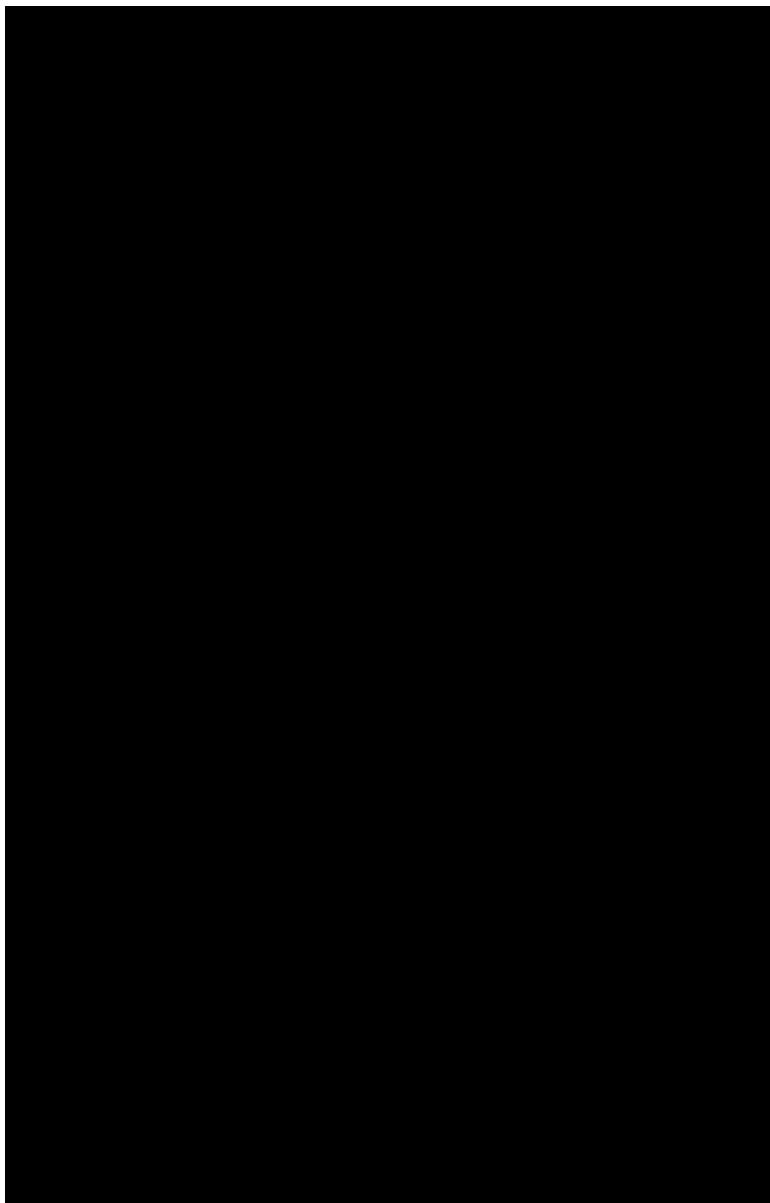

Kilos to Miles

Most other nations use Kilometers instead of miles. This program converts distance in kilometers to distance in miles.

Enter kilos and EXE

```
1 PRINT "KILO TO
      MILE";
10 M=0
15 INPUT " AMT. OF
      KILO.",N
20 FOR I=1 TO N
30 M=M+.62
40 NEXT I
50 PRINT "MILES":M
      ;
60 GOTO 10
```

Celcius to Fahrenheit

Conversion of Celcius to Fahrenheit.
Enter Cel. EXE

```
10 PRINT "CEL TO F
      AHREN.:"
15 INPUT " CEL. ",  
      C
20 F=1.8*C+32
30 PRINT "FAHREN."
      ;F;
40 GOTO 15
```

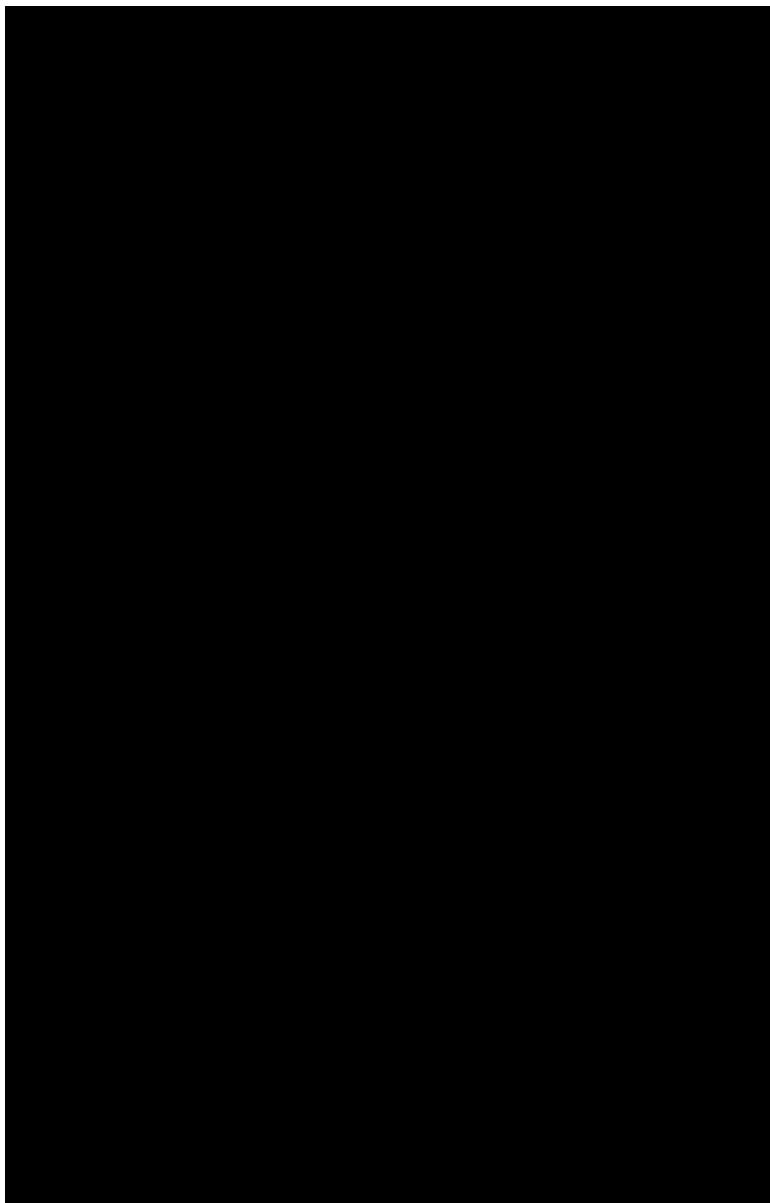

Begin at X and Double Each Answer

Used for expansion of times tables for the projections of growth and profit.

Enter # to double, EXE and # of times doubled, EXE.

```
10 R=0:W=0
15 INPUT "# TO X'S
      DOUBLED":A,W
20 FOR I=1 TO W
30 A=A*2
40 NEXT I
50 PRINT A
60 GOTO 10
```

Programmable: Dollars to Pounds, Franc, Marks

Used for travel when dealing with the currency of another nation.

Enter current value of pound, EXE franc, EXE mark EXE and dollar or dollars to convert, EXE. Program also accepts new dollar amounts to convert.

```
10 PRINT "DOLLARS=
POUND,FRANC,MAR
K:";
20 INPUT "CURRE.POU
ND=",P
21 INPUT "CURRE.FRA
NC=",F
22 INPUT "CURRE.MAR
K=",M
23 INPUT " DOLLARS
",I
30 A=I/P
40 B=I/F
50 C=I/M
60 PRINT I;":";A;"
";B;";C;
70 I=0:A=0:B=0:C=0
:GOTO 23
```

Change in Dollars, Quarters, Dimes, Nickles, Pennies

Enter charge, EXE cash tendered, EXE

```
18 VAC
20 INPUT "CHARGE T
    OTAL",X
30 INPUT "CASH REC
    .",T
41 B=INT (.T-X)
51 R=(T-X)-B
52 C=T-X
60 IF R<.25 THEN 9
    0
70 Q=B+1:A=R-.25
80 GOTO 60
90 IF R<.10 THEN 1
    20
100 D=D+1:A=R-.10
110 GOTO 90
120 IF R<.05 THEN 1
    50
130 H=N+1:A=R-.05
140 GOTO 120
150 P=R*100
160 PRINT "CHANGE="
    ;B;"$ ";Q;"Q'S"
    ";D;"DIMES ";N;
    "NICKLE";
170 PRINT " ";P;"PE
    NNIES ";
180 GOTO 10
```

Lunar Landing Game

Fantasy game creating fuel use, altitude and landing conditions.
Object of the game is to conserve fuel and land safely.

Enter altitude, EXE fuel, EXE how much fuel, EXE (to coast enter 0, EXE). Try to keep a negative escape velocity or you will gain altitude. If you think your altitude and velocity spells crash, burn extra fuel to gain altitude and try new fuel usages. Final velocity gives condition of landing.

```
10 PRINT "LUNAR LA          110 IF E>F:E=F
   NDING:";
11 X=0:Y=0:F=-Y          115 F=F-E
20 INPUT "ALTITUDE        117 R=(2.3*E)-E*F/2
   ",X                  120-2*X
30 Y=0                   128 IF F=0:Y=Y+(-1)
40 INPUT "FUEL",F         121 IF R=0 THEN 130
45 PRINT "GO!";
50 PRINT "ALT.,";X         122 Y=Y+R
55 :                     123 X=X+Y-(R/2)
60 PRINT " YEL.,";Y         124 IF X>1 THEN 50
65 :                     130 Y=-Y
70 PRINT " FUEL LE         180 PRINT "YEL.,";Y;
   FT=";F;                 192 PRINT " YEL.045
80 IF F=0 THEN 110          =OK! ":"5+12 BU
                           MPY ":"12+21 CR
90 INPUT " HOW MUCH        UNCH ";
   H FUEL ",E             195 PRINT "21+47 CR
                           ASH ":"47+77 GO
91 GOTO 110                NE ";
100 GOTO 50                  197 GOTO 20
```

Pseudo Decision Maker Game

Computer chooses a random number, you ask question and enter choice of numbers 1 to 4, computer answers with yes, no, wait, or ask twice.

EXE, ask a question and enter 1, 2, 3 or 4, EXE to get answer.
EXE for another question.

```
1 PRINT "DECISION
      "
2 INPUT "1,2,3,4"
      ,X
3 IF X<1 THEN 2
4 IF X>4 THEN 2
5 Y=INT (4*RAND)
6 IF Y=4 THEN 100
7 IF Y=1 THEN 110
8 IF Y=2 THEN 130
9 IF Y=3 THEN 120
100 PRINT "YES":GOTO
      0 2
110 PRINT "NO":GOTO
      2
120 PRINT "WAIT":GOTO
      0 2
130 PRINT "ASK TWIC
      E":GOTO 2
```

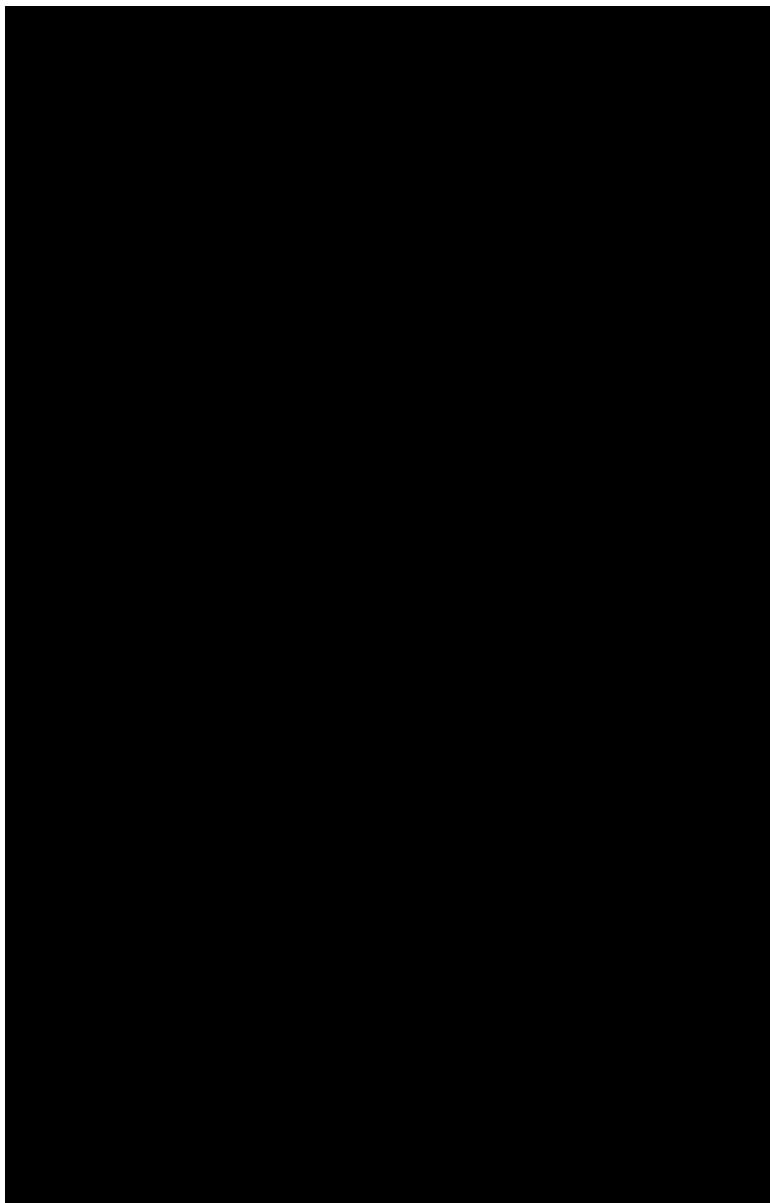

Constant Message Display

Any message you wish to enter, change words in lines 20 through 70 and computer will display message on a constant mode.

EXE. A programmable message display is made by inputting A\$ to F\$ with input questions like, 20 input A\$.

```
10 PRINT "MESSAGE"
20 A$="THE "
30 B$="CAT "
40 C$="IS "
50 D$="IN "
60 E$="THE "
70 F$="BAG "
80 PRINT A$;B$;C$;
      D$;E$;F$;
90 GOTO 20
```

```
10 PRINT "MESSAGE"
20 A$="THE "
30 B$="CAT "
40 C$="IS "
50 D$="IN "
60 E$="THE "
70 F$="BAG "
80 PRINT A$;B$;C$;
      D$;E$;F$;
90 GOTO 20
```

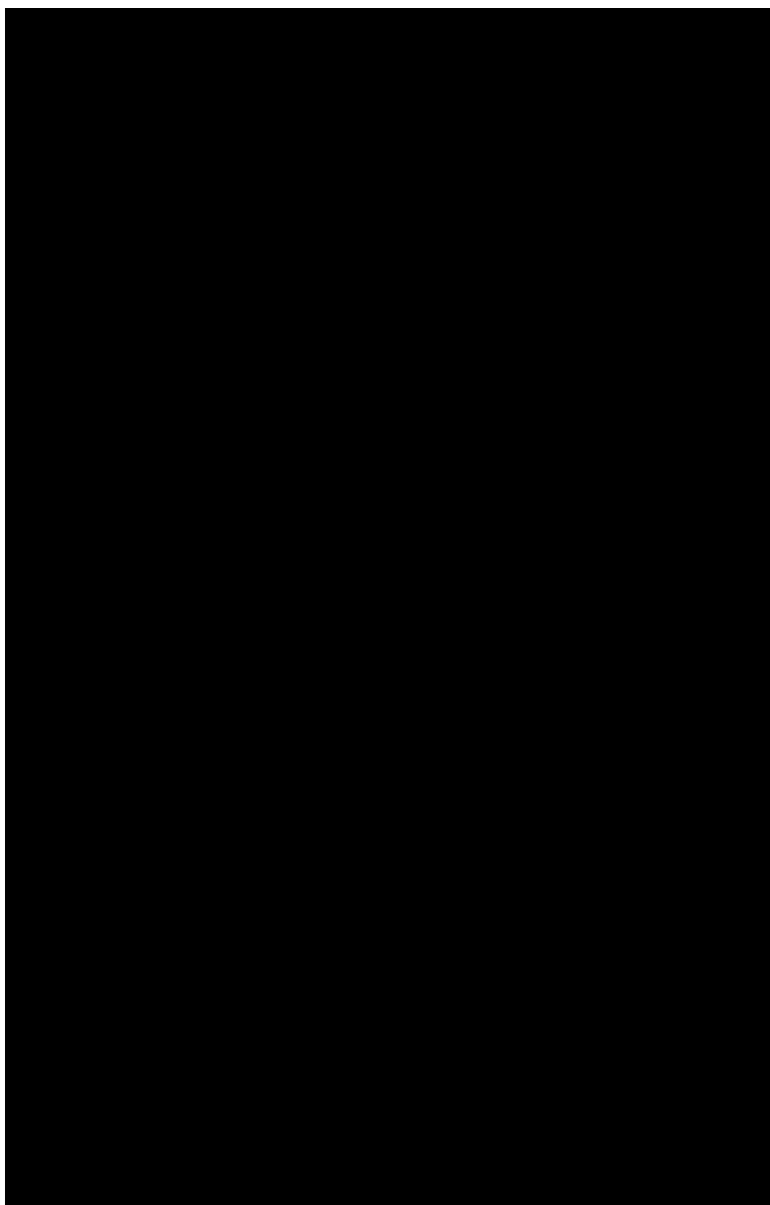

Target-Hit Game

Object of this game is to hit moving target using math as your range finder.

Enter laser aim # by mentally doing the multiplication equation and EXE to see if you're on target, by *TARGET-HIT*

```
7 PRINT "TARGET H
IT ";
8 VAC
9 W=INT (5*RAND*2
)
10 R=INT (99*RAND+
2)
11 E$="LO"
12 F$="HI"
13 IF R<33;PRINT E
$;
14 IF R>66;PRINT F
$;
15 Y=1
16 D=B+Y
17 C=D+C
18 Z=R/2
20 PRINT "X's ";Z;
" BY";W;" ";
21 P=(R/2)*W
23 INPUT "AIM # IS
",B
24 IF P#B THEN 8
25 PRINT "*TARGET
HIT*";
35 PRINT " SHOTS F
IRED";C;*:*
40 GOTO 8
```

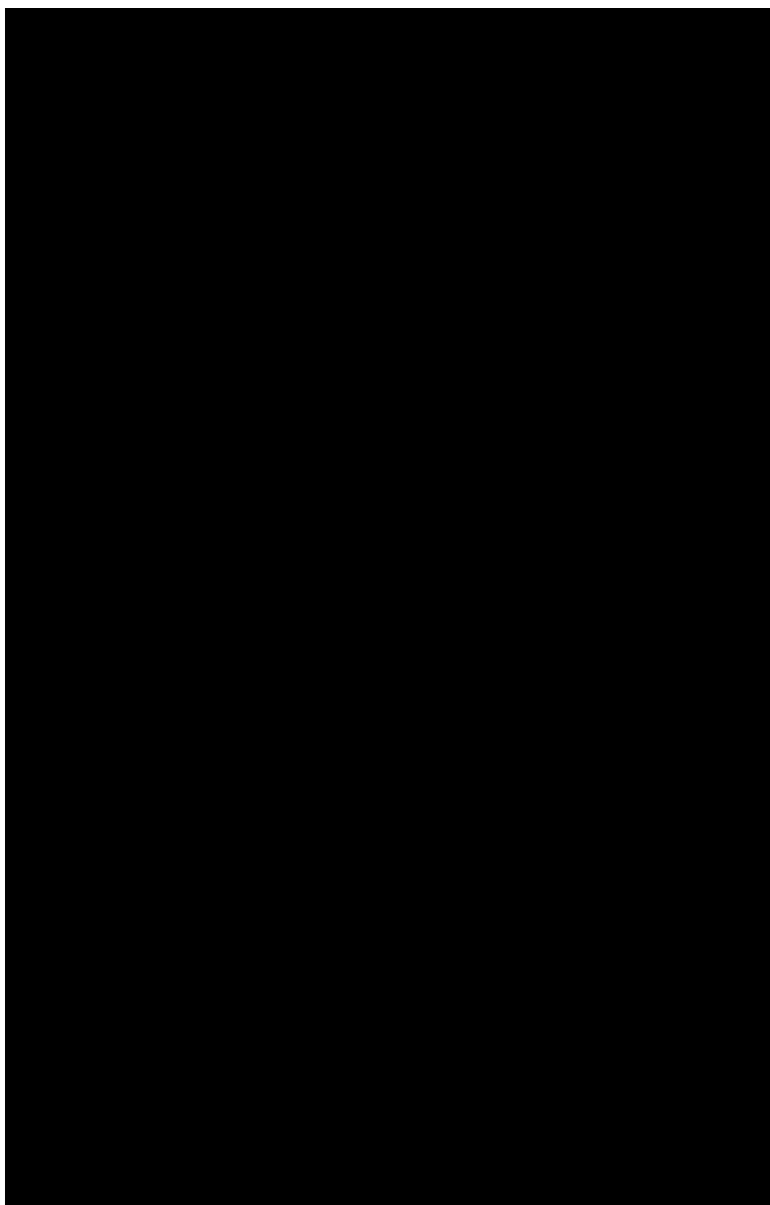

List With Password to Gain Entry

Password list is used for a private list you wish to retain for future reference.

Type list, EXE list, EXE enter 1 and write a seven letter, maximum word, EXE now enter 0 to read the word. If you want to erase the word enter 1, EXE and SPC key, EXE the same rules apply to words 2-12. Don't enter 13 to enter a 13 word since only 12 words, or whatever, can be accepted.

```
1 A$="LIST"
2 B$="LIST"
3 INPUT "PASSWORD
",B$
4 INPUT "PASSWORD
",A$
5 IF A$=B$:PRINT
C$;" ";D$;" ";O
$;" ";P$;" ";G$

Spear the Ohm Game

This game gives different times for you to spear the Ohm and if an Ohm makes other Ohms you must turn the arrow by pressing letter I or P depending on Ohms, newest place on screen. Object is to spear the newest, or original, if original is the only Ohm on screen before time is used up.

Numbers

You can change this game by making the number 7 on line 30 any number lower than 7. Don't tell your number!!!! This game uses 4 players and the last player can make anyone win. First the program tells what game you're playing. You add your secret number to the game number and wait. Now the players input 5 numbers each and the computer adds up the numbers. Now it's your turn!!!! To make your number win, subtract 3 from your game plus secret number. To make the 3rd player win, subtract 2. To make the 2nd player win, subtract 1. To make the first player win, subtract 0. So if it's game 8 and your number is 7 then you must input 5 digits that add up to 12 for you to win. Example 2 EXE, 4 EXE, 1 EXE, 0 EXE, 5 EXE.

The fourth player wins by subtracting 3.

Moon Over Head

This program tells what time the moon will be over us in the sky. First the program asks, M.TIME IN? That's military time into orbit. If your study starts from the first day of our calendar, input 24 EXE. Now the program asks for total days. From day 1 to 10/2/84 we have 724931 days. Input 724931. The read-out should say PM 6 18. So on 10/2/84 the moon was over us in the sky at 6 18 PM. Now for study from 10/2/84 your M.TIME IN is 18 which is 6 PM. If you get a day moon over head look in your local newspaper for moon rise and set times and check the program by that info.
