

The DeSmet Tools disk contains some Unix-like tools and their source code:

PCMAKE

program maintenance utility. Keeps track of source files and modification dates to maintain programs which require multiple files. Makefile syntax is slightly different than the UNIX make.

FASTSCR

accelerates text output to the screen.

LS

another directory listing program

RM

a file deletion program

GREP

a file search utility

MORE

a slightly more sophisticated version of the PC-DOC more.com program.

FREE

a program to display free space on a disk without doing a directory listing.

MERGE

a C source and assembly language merged listing utility.

TOOLBOX.S

a few utilities used in these programs.
