When I first started tracking down the DeSmet source, one of the first parts I found was the SEE source. But, I did not have permission to distribute it.

However, with the opening of the compiler source, the author has given me permission to open the SEE source as well.

The version he had available was 4.2, a later version than anything I had seen with the DeSmet compiler. So, while the SEE section of C88_31H.PDF (warning: it's a 10.2Meg file) may be a useful starting place, a better manual may have to be written based on the source code.

The source to SEE, Version 4.2: SEE42SRC.ZIP

The compiler need for the source is DeSmet C, version 3.1h
