PRODUCT NEWS

The following information is provided by Technical Support,
Computer Customer Service, and Computer Merchandising.

SPECIAL SOFTWARE OFFER LETTER

Computer Merchandising sent out 2 memos (December 28, 1984 and January 9, 1985) about a SPECIAL SOFTWARE OFFER LETTER. The memos went to stores, and the letters should be in customers' hands by now.

One big boo-boo on the Model II/12/16/16B/16h+ page: the description of 26-6209 is WRONG! Use the information in Computer Catalog RSC-14 (page 23) about Job Costing. Don't sell 26-6209 to do what the description in the letter shows. It won't.

DESKMATE (25-1000, 01.01.00) - ENHANCEMENTS AND BUG FIXES

Desk:

- All modules support international character set and all prompts are read from a file for the international versions.
- Printer driver will form feed before asking to print next page.
- Alarm will beep 8 times instead of 3 times.

Menu:

- Swap will work with non-program disks and directories.
- Improved display for color changes.
- Fixed display of 12 am in events area.

Text:

- Fix bug in default format of screen.

Worksheet:

- Selected colored blocks stored on disk for retrieval.
- Round numbers on display.

Filer:

- Fix bug in adding records with a large file.
- Fix bug in print of large file.
- When <RESET> is pressed on Find (F1), will retain current file pointer.
- Expand capacities from 130 to 330 records on 128K machines.
- Add error routine to check for max records.

Telcom:

- Added delay function in modem definition to speed character transmission to the modem.

Calendar:

- Expand copy and merge buffers to handle over 40 dates (100).
- Fix bug in calendar (file IO error).
- Allow a merge from one drive or directory to another.

Host:

- Allow the remote user to overwrite files.
- If remote does not type correct password after 3 tries host will disconnect the line.

Printer:

- Enable the arrows for cursor movement on parameter screen.

Phone:

- Speed up phone dialing on 1000 internal modem board.

Alarm:

- Bug fix

EDUCATION

TRS-80 EDUCATIONAL SOFTWARE SOURCEBOOK (26-2712)

Be sure to have plenty copies of the TRS-80 Educational Software Sourcebook on hand (third edition, 26-2712).

Starting February 25, 1985 124,000 teachers and administrators nationwide will begin receiving a promotional mailing from Fort Worth with a certificate for a FREE copy of the sourcebook. To redeem this certificate, teachers simply visit a local Radio Shack store or Computer Center or participating dealer.

Please make sure that the educator prints his or her name and the name and address of the school on the certificate. When you give out a sourcebook, take the certificate. The store manager will then sign the certificate and drop it in the mail. Postage on these certificates is prepaid for your convenience.

This promotion will help inform educators about the large amount of educational software available for TRS-80 and Tandy computers, and will get them into your store.

EXPRESS ORDER SOFTWARE

EXPRESS ORDER SOFTWARE TANDY 2000 SOFTWARE MEMORY REQUIREMENTS

Most Tandy 2000 Express Order Software programs require a minimum memory of 256K, unless otherwise indicated in the Directory of Reviewed Software. Accounting Partner I (90-0112) requires only 128K on the Tandy 2000. However, EasyWriter I System (90-0115) is listed as requiring only 128K but it actually requires 256K. This discrepancy in the Directory will be corrected.

R:Base 4000 (90-0136), R:Base XRW (90-0138), R:Base Clout (90-0137), and AutoCad (90-0181) all require 384K. Please be aware of these requirements and advise your customers accordingly.

DELIVERY DELAYS

With very few exceptions you SHOULD receive EOS products in 7 days or less after ordering. We ship within 24 hours (if the product is in stock) by UPS ground carrier. That means that the farthest part of the country from Fort Worth should be no more than 7 days away. We have upgraded our backorder reporting system to AVOID backorders, but occasionally they will happen. If you are not getting products in a reasonable time PLEASE call or write to the Express Order department (1300 One Tandy Center). Make sure you have the date of the order, the customer name, your store number, and the EOS 90-series number. Don't wait for 2 or 3 weeks until the customer is angry, let us know before, so we can determine the problem.

EXPRESS ORDER SOFTWARE DEMO DISKS

Express Order Software demo disks will be available as "FC" series of catalog numbers from TFW. The first six include:

AutoCad Tutorial System (FC-0900) Demonstration kit for the Tandy 2000. This is the complete system. The only difference is that drawings cannot be saved. Also includes FC-0901.

AutoCad Slide Show (FC-0901) Self running demo of AutoCad on the Tandy 2000.

Open Access Demo (FC-0902) Demo for the Tandy 1200 HD or Tandy 1000.

Accounting Partner Demo (FC-0903) Demo for the Tandy 2000/1200 HD/1000.

Jack 2 Demo (FC-0904) Demo for the Tandy 2000.

Great Plains HD Accounting Demo (FC-0905) Demo for the Tandy 2000.

EOS SOFTWARE COMPATIBILITY

Please make sure you check to see if a package you are selling is appropriate for the hardware. For example, AutoCad is a Tandy 2000 package ONLY and is stated as such in the UPDATES. Some packages are listed as MS-DOS and will run on the 2000/1200 HD/1000. Packages listed as only 1200 HD /1000 will only run on those machines. We have several duplicate programs, i.e., Tandy 2000 Open Access (90-0114) and Tandy 1200 HD Open Access (90-0247), please check your Updates for this information.

MDX1 (90-0125) - USER EXPANSION OPTION

Please be aware that this package runs its best with NO more than three users. More "users" are available as an option from the VENDOR, at a cost of \$300.00 per terminal, BUT the VENDOR and Express order suggest you not sell this package with that option. As a matter of fact the VENDOR will try everything in it's power to convince the customer NOT to purchase this upgrade on the Model 16.

MODEL 4 T/MAKER 90-0128 REPLACED BY 90-0272

The Model 4 version of this package is now 90-0272. The program (90-0272) runs under TRSDOS as opposed to CP/M+ (90-0128). 90-0272 also is available at a lower price. For further clarification the CP/M+ version (90-0128) has been discontinued.

BETTER BASIC (90-0225) - ENHANCED MBASIC FOR THE TANDY 2000/1200 HD/1000

This package is supplied with BOTH a Tandy 2000 disk and an "IBM" disk for the Tandy 1200 HD and 1000. You can also sell this package to your "IBM" customers. Among the many things this software does, is allow use of all available RAM on the MS-DOS computers. Watch for the 5 star review of Better BASIC in a future issue of 80 Micro.

MANAGING YOUR MONEY (90-0278) - WITH IBM COMPATIBLE PRINTERS

This is one of the hottest selling products in the United States. It will run on the 1200/1000 and IBM compatibles. You need to be aware that our version is deficient in one area, you cannot print the "graphics" unless you are using one of our IBM compatible printers or one of the printers listed in the setup program, and the customer must use the PC-DOS version of "GRAPHICS.COM", and not ours. The Vendor states that less than 2% of it's customers ever try to print graphs, so this should not cut into your sales of the product (or the hardware). EOS is hopeful that an "enhanced" version of "GRAPHICS.COM" will be available with out version of DOS in the future. A customer that wants to print graphs must have the appropriate printer, and can purchase a copy of PC-DOS from other sources.

EXPRESS ORDER SOFTWARE FUTURE PRODUCTS

The following is a list of future EOS 90-series numbers for Computer Software. The date under availability is when you can expect TEW to ship a new order.

Product	Availability as of 02/01	Product	Availability as of 02/01
Color Computer		Tandy 1200 HD (continued)	
90-0267 Rainbow Book (Simul)	02/15/85	90-0265 The Precedent	02/15/85
		90-0266 Docket Control	02/15/85

EOS EDUCATIONAL SOFTWARE AVAILABILITY INFORMATION

Educational software available through the Express Order System is maintained by the Education Division. Software offerings in the system include instructional programs for the home and school learning environments, school administrative software and programming applications. All sales and ordering guidelines in force in the on-going EOS program apply to these educational programs.

CSR GRAPEVINE

As indicated by the name, "Grapevine", this section is where Customer Service Representatives share information with each other. It is here you can communicate your latest findings and "bits of wisdom" to all CSR's. If you wish to contribute to the CSR Grapevine use the Submission Form attached to RSCC/PLUSCC TRS-80 Update 1985-01 - 1985-04, or send your information to CompuServe ID number 70007,535. Please be sure to include your Name, Title, Telephone Number and Store Number.

NOTE: We attempt to separate fact from fiction but not being omniscient we may occasionally goof. If so, let us know about it. We'll gladly correct ourselves.

All articles which do not include a by-line came from Computer Customer Service.

MODEL 4/III PAYROLL (26-1543 & 700-2242) - BACKING OUT OF A CHECK

When backing out a check with a manual transaction, there are some instances when the check will not back out properly. This problem occurs when limits have been met prior to backing out the check (e.g. sui, workers comp., etc.).

To correct this, use employee history to change the incorrect figures for all periods of an employee.

(C. HYDE, 01-7879)

MODEL 4 SUPERSCRIPSIT (26-1595) WITH THE DMP-430

With the DMP-430 printer you can only do straight, single-spaced text. No special print features such as bold and underline until a new driver is produced. Use DMP400 driver for the time being.

XENIX - PROBLEMS READING TAR DISKETTES

Got those "can't read a tar diskette" Xenix blues? Has the drive been cleaned and now passes all your tech's diagnostics?

Hopeful hint: Make sure the tech checks FDC alignment. This circuit is phase-locked-loop and is normally self correcting. However, several floppy problems here have been traced to an out-of-alignment FDC. Because of the PLL circuit, it is not normally part of the test procedure.

(DAVID CLAYPOOL, STORE #11-7212)

MANUALLY AUTO DIALING ON THE TANDY 1000

In the Tandy 1000 manuals there is an implication to use 8 bit word and no parity when auto dialing. This is not correct. Use a 7 bit word and even parity. Below is an example of dialing using keyboard commands.

1. Enter Telecom program. Go to the status menu.
2. Set 7 bit word, Even parity, if the system you are calling supports xon/xoff, leave it on. If you are not sure, turn it off until you find out.
3. Press F5 to enter terminal mode.
4. Type a star * to open the modem for programming.
5. Type a C to clear previous modem information.
6. Type a star * again to reopen the modem.
7. Type D for dial.
8. Type T for tone systems or R for rotary system.
9. Enter the telephone number exactly as you would dial it.
10. Type an X to dial the number.
11. Provided the telephone number you are calling is not busy and it has a modem at the other end, you should make a connection within 15-45 seconds. If you are calling Dow Jones, once you are on-line the message:

 'Enter your terminal identifier'

will appear. From this point, follow the instructions given to you by that system (logon instructions).
12. When you are done with your work on that system, logoff using the procedures given to you by that system.
13. To disconnect the telephone line type CONTROL-T.

(B. BENSON, 01-7879)

SWITCH SETTINGS FOR THE TANDY 1200 HD

Switch switch which switch to switch to which? In the hardware group we answer this question several times in a day. The manual supplied with the board does not show what switches to change on switch bank 2 (memory switches); also, it does not indicate what is on and what is off. When the side of the switch with the dot on it is pressed down that is ON, ON is NOT when the side with the dot is up. Below are the switch settings for the 1200's switch banks 1 and 2 with no expansion RAM installed and no expansion boards installed.

(continued on the next page)

SWITCH SETTINGS FOR THE TANDY 1200 HD (continued)

Switch Bank 1 of the Main Processor Board

SW1- 1	OFF	This switch must be left in this position at all times.
SW1- 2	ON	If the 8087 socket is empty (which it should be). (Currently we are not supporting the use of the 8087.)
SW1- 3 & 4	OFF	For 256K of RAM on the MAIN PROCESSOR board.
SW1- 5 & 6		These are your monitor switches. 5 OFF 6 OFF for monochrome monitors (See note 1). 5 OFF 6 ON for color monitors in 40 x 25 color mode. 5 ON 6 OFF for color monitors in 80 x 25 color mode.
SW1- 7	ON	This denotes there is 1 floppy and 1 hard drive.
SW1- 8	ON	This MUST be ON at all times.

NOTE 1: If you have installed a Graphics Tender board (25-3043) and you are connecting the VM-3 monitor to the system, switch 5 is ON and 6 is OFF just like the 80 x 25 color. The proper switch settings on the Graphics Tender board are:

Jumper 7	OUT	Jumper A	IN
Jumper 6	IN	Jumper B	OUT
Jumper P6	OUT	Jumper C	IN
Jumper 8	OUT		

The switch on the end of the board should be in the up position and the remaining jumpers are configured according to the owner's manual. When that change has been made you will need to adjust the monitor if the screen appears to have shrunk. This adjustment is done from the rear of the monitor like a TV set.

Settings For Switch Bank 2 on the Main Processor Board

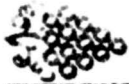

Amount of Expansion RAM in slots	S2-1	S2-2	S2-3	S2-4	S2-5	S2-6	S2-7	S2-8
No extra RAM	OFF	OFF	OFF	OFF	OFF	OFF	OFF	OFF
	Systems are shipped with no expansion RAM.							
64K	OFF	ON	ON	ON	ON	OFF	OFF	OFF
128K	ON	OFF	ON	ON	ON	OFF	OFF	OFF
192K	OFF	OFF	ON	ON	ON	OFF	OFF	OFF
256K	ON	ON	OFF	ON	ON	OFF	OFF	OFF
320K	OFF	ON	OFF	ON	ON	OFF	OFF	OFF
384K*	ON	OFF	OFF	ON	ON	OFF	OFF	OFF

*When installing the Captain board, be sure to set switch bank 2 because you are adding 384K of expansion RAM. DO NOT use the IBM switch setting in the Captain board manual.

Additional Information on the Captain Board's Switch Bank 1

When installing the Captain board (25-3061), you also need to tell it that there is more memory. Switches 1, 2, 3, and 4 are for this purpose. In the appendix they refer to two types of switches, a rocker and slide type. Below are the RAM settings for the Captain board with the additional 384K of RAM.

(continued on the next page)

SWITCH SETTINGS FOR THE TANDY 1200 HD (continued)

Switch Number	Slide Type	Rocker Type	Configuration
1	ON	CLOSED	
2	OFF	OPEN	
3	OFF	OPEN	
4	OFF	OPEN	
5	ON	CLOSED	Serial Port COM1/COM2
6	OFF	OPEN	Printer Port LPT1/LPT2
7	ON	CLOSED	ENABLE/DISABLE Serial Ports
8	ON	CLOSED	ENABLE/DISABLE PRINTER/CLOCK/CALENDAR Port

Switches 5 through 8: set to what your configuration will be.

MAI BASIC FOUR ACCOUNTING PROGRAMS FOR THE TANDY 2000 ONLY!

At this time, we need to make all stores aware that MAI BASIC FOUR Accounting Packages will only be supported on the TANDY 2000 Computer. This may change in the future, but for now this will be the policy of Computer Customer Service.

TANDY 2000 ACCOUNTS PAYABLE (26-5212) - VENDOR CREDIT MEMOS

Vendor Credit Memos must be entered as an adjustment to an open invoice. If an invoice has been paid and a credit memo is issued, these transactions should be entered in the General Ledger. This procedure should be followed so as to avoid any incorrect balances in the General Ledger accounts.

(C. HAMBLEY, 01-7879)

MICROSOFT WORD (25-1153 & 26-5314) - PROPORTIONAL PITCH

In Appendix A of the Microsoft Word manuals for the Tandy 2000 (26-5314) and the Tandy 1000 (25-1153) the "Available Fonts" tables include three sets of fonts: 12, 10, and 8. To support proportional pitch choose the 8 point font, since propotional pitch characters are 8-point. (See the explanation of pitch and points in App. A.)

SERIAL PRINTING FROM A TANDY 2000

Serial printing is achieved through use of the MODE and PRINT commands of MS-DOS. Use MODE to set up communication parameters. For example, for a DWP-210 use the following command: Mode com 1200 N 8 1

Then use the SPOOLER command PRINT to print the file(s): Print file1 file2 ...

MS-DOS will prompt you for the print device (default=PRN) simply type in aux.
Presto -- serial printing.

You may also set up communication parameters through BASIC with the use of the Open Com statement.
