PRODUCT NEWS

The following information is provided by Technical Support,
Computer Customer Service, and Computer Merchandising.

MODEL 4 MULTIPLAN (26-1530, 01.06.00 & 01.07.00) - ACCESSING HELP FILES

If "Transfer Options" is used for "setup" on Drive 1, it is not possible to access the HELP files. In order to use HELP while using a data disk in Drive 1, the user must specify Drive 1 within the file name (i.e., "filename:1") and avoid using "setup" within the Transfer Options mode.

CONTRACT SERVICES

COMPUTER EQUIPMENT SERVICE AGREEMENTS

Due to numerous inquiries, there is a need to restate the authorized SPIFF percentages so that we all have the same understanding.

FOR LEASES, calculate the SPIFF at 3% of the total Service Agreement amount. For example:

Total monthly cost	\$ 250.00
Total number months	34
Total S/A amount	\$8500.00
Lease SPIFF factor	X .03
Total SPIFF	\$ 255.00

FOR NEW CONTRACTS, ADD-ONS, and CONVERSIONS, calculate the SPIFF at 6% of the total annual Service Agreement amount. This applies to all new contracts, add-ons, and conversions that are not considered House Accounts. Contracts written for a One Year Warranty do not pay a SPIFF unless the customer chooses one of the optional types of service.

FOR RENEWALS, calculate the SPIFF using the following table:

Discounts of 00% - 15%	SPIFF 3.0%
Discounts of 16% - 19%	SPIFF 2.0%
Discounts of 20% or greater	SPIFF 1.5%

EDUCATION

COBOL FOR THE TRS-80 MODEL III: VOLUME ONE (26-2702)

A Model III COBOL instructional package will be released by Radio Shack this summer. COBOL for the TRS-80 Model III: Volume One is a Model III version of the Model II/12/16 COBOL teaching package already available (COBOL for the TRS-80 Models II, 12, and 16: Volume One, 26-2706).

This new Model III package is designed to teach the fundamentals of COBOL programming to secondary and college-level students. It is ideal for use either in a classroom setting or as a self-teaching program. A comprehensive self-teaching manual in the package presents COBOL concepts using tutorial text and many examples. The instructional disk that comes with the package contains quizzes and hands-on exercises. The following topics are covered:

- Chapter One: Introduces the major elements of a COBOL program. Students practice loading COBOL and they run a sample program.
- Chapter Two: Introduces the terminology and concepts of file processing. Students learn the COBOL statements that are required for file processing, and they supply the missing parts of a file-processing program.
- Chapter Three: Discusses and provides hands-on practice in creating and compiling COBOL programs using the TRS-80 Model III.
- Chapter Four: Begins in-depth coverage of COBOL statements, their actions, and their syntax.
- Chapter Five: Discusses compilation errors and execution errors and provides detailed examples. Students gain hands-on experience in debugging COBOL programs.
- Chapter Six: Introduces some of COBOL's advanced features, including nested and compound IF statements, the MOVE CORRESPONDING statement, and table processing.
- Chapter Seven: Provides valuable guidance on programming style, standards, and structured programming.

COBOL for the TRS-80 Model III: Volume One, is designed for use with a TRS-80 Model III two-drive system with at least 48K memory. Model 4 computers will run this program in Model III mode. The Radio Shack Model III COBOL Development System (26-2203) is also required to complete the hands-on exercises in this package.

A paperback volume, COBOL for the TRS-80 Microcomputer, Volume One Class Notes (26-2723), provides outline teacher notes for use with either the Model III or the Model II/12/16 version of the COBOL instructional package. These large-print notes are ideal lecture notes, and can be reproduced on plastic for use as overhead transparencies.

COBOL for the TRS-80 Model III: Volume One
Catalog Number: 26-2702
Availability: Summer, 1985

EXPRESS ORDER SOFTWARE

EXPRESS ORDER SOFTWARE TANDY 2000 SOFTWARE MEMORY REQUIREMENTS

Most Tandy 2000 Express Order Software programs require a minimum memory of 256K, unless otherwise indicated in the Directory of Reviewed Software. Accounting Partner I (90-0112) requires only 128K on the Tandy 2000. However, EasyWriter I System (90-0115) is listed as requiring only 128K but it actually requires 256K. This discrepancy in the Directory will be corrected.

R:Base 4000 (90-0136), R:Base XRW (90-0138), R:Base Clout (90-0137), and AutoCad (90-0181) all require 384K. Please be aware of these requirements and advise your customers accordingly.

EXPRESS ORDER SOFTWARE PRODUCT AVAILABILITY

The following is a complete list of EOS 90-series numbers for Computer Software. The date under STATUS is when you can expect TEW to ship a new order.

NOTE: These products are listed in alphabetical order by product title.

 CSR GRAPEVINE

As indicated by the name, "Grapevine", this section is where Customer Service Representatives share information with each other. It is here you can communicate your latest findings and "bits of wisdom" to all CSR's. If you wish to contribute to the CSR Grapevine use the Submission Form attached to the last Update of each month, or send your information to CompuServe ID number 70007,535. Please be sure to include your Name and Store Number.

NOTE: We attempt to separate fact from fiction but not being omniscient we may occasionally goof. If so, let us know about it. We'll gladly correct ourselves.

WARNING: The information contained in the CSR Grapevine is made available on an "as is" basis for the use of store personnel only. Much of the information will not be supported by Computer Customer Service and in no way shall Tandy Corporation be responsible for any problems caused by the use of this information.

All articles which do not include a by-line came from Computer Customer Service.

CORRECTION TO UPDATE 1985-04 - FRAMEWORK (25-3160) ON THE TANDY 1000

1. To get down a level into a frame (gray +), use:

Now reads : <CONTROL> <RIGHT ARROW>

Should read : <CONTROL> <DOWN ARROW>

(S. LATHAM, 01-0233)

DC-2212 MODEM (26-1176) - WITH XENIX 01.03.05 & 03.00.00

The notice below is included in the packing of the DC-2212 modem. Please be aware that the last paragraph states that auto-dialing is not supported on any versions before 03.00.00.

IMPORTANT NOTE!

Your DC-2212 Intelligent Modem is factory preset with the AUTO ANSWER switch in the OUT position. At power-up, this switch position provides the "Auto-Dial Mode" which is the proper setting for most software applications.

Under XENIX, however, this switch must be set to the IN position for proper operation. (The IN position provides "true carrier detect.")

Also note that on Xenix versions prior to 3.0, the unattended auto-dial feature is not supported.

(L. HINES, 01-7879)

MODEL 4 SUPERSCRIPSIT (26-1595, 01.01.00) - WITH DWP410 DRIVER

SuperSCRIPSIT and the DWP410 driver do not use the same "old" spacing width as the DWII driver when adjusting the proportional spacing width between characters. To change the spacing width for the DWP410 driver use the following PATCH. For specific instructions refer to page 117 of the SuperSCRIPSIT Reference Manual.

PATCH DWP410/CTL (D00,1C=WIDTH,F00,1C=08)

(J. PARRIS, 01-7879)

PROFILE 16 (26-6412, 01.00.00) PROBLEM IN SAVE SCRIPT

A problem has been noted in the save script in Profile 16. Sometimes the save appears to put several meg of data on one floppy disk. This is due to the 'tar' line in the script not having the 'b' option in the command line. Adding this flag and the proper option appears to correct the problem.

To correct the script, you need to change the next to last line, which reads:

to read: /bin/tar cvfkn \$floppy \$size \$dirs
 /bin/tar cvfbkn \$floppy 16 \$size \$dirs

(T. McCARTY, FRANCHISE)

TANDY 6000 - ERROR IN CORE MANUAL

The Tandy 6000 core manual set has an error in the System Administrators Guide to Xenix on page 42. This page contains an explanation of using the tar command as an optional method of backing up files, as opposed to tsh-shell save and sysadmin. The command gives the "number of bytes" to use in the command line.

The numbers are incorrect. These numbers are the number of blocks that are used when making a file system on a single or double sided diskette. The number of bytes (actually kilobytes) should be 608 for a single sided disk and 1224 for a doubled sided disk.

Using the numbers given in the manual will produce interesting results, as the program will try to use twice as much disk space to save with than there is really available on the diskette. The Language and Operating Systems Support group also suggests to use the following command instead of the one given in the manual:

tar -cvfbk /dev/fd0 16 (byte count) (namelist)

where byte count is 608 or 1224 depending on the diskette you use and namelist is the file or files that you wish to copy. The difference in this command is that instead of writing to the raw device as before, here you are writing to the character device and are providing a blocking factor (the b in the options list and the 16 in the arg list). This will avoid some problems in large files going over multiple volumes of a save.

A Publication Change has been submitted.

(T. McCARTY, FRANCHISE)

FRIDAY! (25-1149, 02.00.00) - FILE LIMITATION

There are no known limits to the number of files Friday! can hold. It should only be limited by disk space. There is a prompt in Friday! which tells you how much space you have left on your disk. See page 81, Prompt 700, option G, in the Friday! manual.

MICROSOFT WORD (25-1153, 01.00.00) - WITH THE DMP 430 DRIVER

When using the DMP 430 driver at the default settings (left margin 1.25 and right margin 1.25) on Microsoft Word, the first character in the document is shifted to the right by one character. One solution to the problem is to shift the margin setting to an even tenth of an inch increment (i.e. right margin 1.2, left margin 1.2).

(DON H. MARSHALL, STORE # 11-7246)

FRAMEWORK (25-3160) - GUIDELINES WHEN USING ONLY 256K

When using Framework (25-3160) with only 256K (not using Telecom), the following should serve as a GENERAL guideline to file capacities:

1. Twelve pages of text per document
2. 522 spreadsheet cells (assuming ten percent empty, thirty percent are formulas, and sixty percent are numbers).
3. Seventy-six database records (based on ten fields per record, ten characters per field).

MULTIPLAN (25-1152 & 26-5311) - PROGRAM DIFFERENCES

The versions of Multiplan for the Tandy 1000 and 2000 differ. Multiplan for the Tandy 1000 includes the functions IRR (internal rate of return), MIRR (modified IRR), PV (present value) and four others related directly to PV. The Tandy 2000 version (01.10.00) does not include these functions, and they are not easily duplicated.

EDITOR'S NOTE: A new version of Multiplan for the Tandy 2000 will be available in late August that incorporates these features.

(BRAD GLASS, STORE #11-7111)

MULTIMATE (26-5330) - WITH THE DMP-2100 PRINTER

The DMP-2100 can not be put into correspondence mode from within Multimate due to the fact that the control codes needed (27,29) are reserved characters in Multimate. "A software correction is not possible, but this limitation will be documented in version 03.30.00" was the answer to Software Problem Report #5330-11.
