PRODUCT NEWS

The following information is provided by Technical Support,
Computer Customer Service, and Computer Merchandising.

MODEL 4 QUERY (26-2026, 01.00.00) - INCORRECT INFORMATION IN CATALOGS

The descriptions of Query on page 34 of Computer Catalog RSC-15 and page 11 of RSC-16 indicate that Query is a Model III/4 product. This is incorrect. Query requires a 2 drive, 64K Model 4.

ATTACHE ACCOUNTING SOFTWARE (90-0160 - 90-0166 & 90-0411) - DISCONTINUED

Attache Accounting Software has gone out of business; therefore, we have discontinued selling their products. Computer Customer Service WILL NOT take over support of the Attache Accounting Software. There is no customer support available at this time. If this situation changes, stores will be notified.

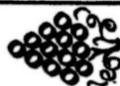

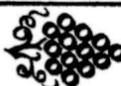

TELECOMMUTER & TELECOMMUTER PLUS (90-0210 & 90-0347) - ERROR IN CATALOG RSC-16

In the RSC-16 catalog, page 69, descriptions for Telecommuter (90-0210) and Telecommuter Plus (90-0347) are not accurate. Please note the following corrections:

1. The products are listed under utilities, but primarily they are communications products with word processors.
2. Hardware requirements are listed as 384K and a modem. Both products require only 128K RAM.
3. Support is listed as being provided by Sigea Systems for a nominal charge. Support is in fact free.

Telecommuter and Telecommuter Plus are products designed to provide a communications link between an MS-DOS personal computer and our portable computers. They offer word processing (enhanced version of "Text" on the Model 100), file transfer, Telcom with on-line access to Text, and Host mode. Host mode allows the remote Model 100 user to execute DOS commands and run applications on the personal computer. Telecommuter Plus offers XMODEM file transfer, VT100 emulation, keyboard macros, and multi-level security in host mode.

Telecommuter and Telecommuter Plus give you several sales opportunities. Existing Model 100 customers will understand the benefits of file transfer and remote access. You can also sell a PC and a portable as a system. Let's not allow catalog errors to affect our sales opportunities!

 *CSR GRAPEVINE* 

As indicated by the name, "Grapevine", this section allows Customer Service Representatives to share information with each other. It is here you can communicate your latest findings and "bits of wisdom" to all CSR's. If you wish to contribute to the CSR Grapevine use the Submission Form attached to the last Update of each month. Please be sure to include your Name and Store Number.

NOTE: We attempt to separate fact from fiction but not being omniscient we may occasionally goof. If so, let us know about it. We'll gladly correct ourselves.

WARNING: The information contained in the CSR Grapevine is made available on an "as is" basis for the use of store personnel only. Much of the information will not be supported by Computer Customer Service and in no way shall Tandy Corporation be responsible for any problems caused by the use of this information.

All articles which do not include a by-line came from Computer Customer Service.

DISK CARTRIDGE SYSTEM (26-1245) - PROPER BOARD ORDER

When setting up a Disk Cartridge System on the Tandy 6000 or 1000/1200/3000 follow these specifications:

On the Tandy 6000 place the boards from TOP TO BOTTOM as follows:

- 68000 Processor Card
- 68000 Memory Card
- Video Card
- Disk Cartridge Card(s) (26-6018)
- Multi-user Card(s) (26-6013)
- Hard Drive Interface Card - must be in the bottom slot.

No special order applies for the Tandy 1000/1200/3000 Interface Board (25-3022). However, if you install a second disk cartridge drive in the system, you must turn switch SW1-1 OFF. (Leave it ON if you have only one disk cartridge drive in the system.)

(D. GRIFFIN, 01-7879)

MODEL 4 MULTIPLAN (26-1530, 01.07.00) - DOLLAR SIGN FORMAT

On version 01.07.00 of the program, the Help screen indicates that the \$ cell format can be changed to zero decimal places. The manual, however (see page 247), contradicts this, as does the actual operation of the program. The \$ format restricts you to 2 decimal places, with no option to change it. To correct the Help screen would require a new release of the program. No new release is planned at this time.

SCRIPSIT 16 (26-6431, 01.01.00) - LOADING LARGE FILES

When trying to load large files (i.e., converting ASCII files of approximately 1.5 meg or larger) into SCRIPSIT 16; the system either locks up or gives a core dump. This is due to the fact that a downloaded ASCII file can only be as large as 200K and still have the full functionality of SCRIPSIT. Currently, there are no plans to improve this capacity.

SCRIPSIT 16 (26-6431, 01.01.00) - PRINT MERGE FUNCTION

Please be aware that when using the Print Merge function and specifying pause between pages, the Resume key must be pressed twice before printing resumes.

TANDY 1000 (25-1000) - MICROSOFT WORD 2.0

Version 2.0 of Microsoft Word for the IBM-PC was briefly tested on the Tandy 1000 using the .PRD printer description files provided with the current Tandy 1000 version, 25-1153. No problems were found with the program functioning, and the .PRD files gave the same printed results as they did with the Tandy product.

(J WOOD, 01-0100)

WORDSTAR PROFESSIONAL (25-3170) - WITH THE DMP-105 (26-1276)

To use the DMP-105 with Wordstar Professional, install the DMP-105 as a standard printer, then run the winstall program and set the code sequences as follows:

1. Select "Custom Instruction Of Printers"
2. Select (D) Initialization.
Set the Printer initialization function code sequence to: 1Bh 15h
3. Select (N) Return/Line Feed.
Set the Return and Line Feed control sequence to: 1Bh 16h 8Dh
Set the Return (no Line Feed) code to: 1Bh 15h 8Dh

Wordstar will now send the correct codes for bold and underline.

NOTE: This has not been tested by Computer Customer Service.

(GEORGE A. DUMMIGAN, STORE #26-1276)

TANDY 1200 HD (25-3000) - IBM PC-DOS 3.10 INSTALLATION PROCEDURE

IBM's PC-DOS 3.10 will work on the Tandy 1200 HD, but due to some differences in file management between the Tandy 1200 HD's MS-DOS 2.11.41 (25-3130) and IBM's PC-DOS 3.10, certain steps have to be taken to insure correct operation of PC-DOS 3.10 and the Tandy 1200 HD.

1. Boot up the Tandy 1200 HD using the Tandy 1200 HD MS-DOS 2.11.41 system disk.
2. After reaching the "A>" prompt, type: **LLFDFMT <ENTER>**

LLFDFMT.COM is the Low Level Fixed Disk Formatter for the Tandy 1200 HD. This program must be used in this procedure since the Tandy 1200 HD is shipped with an unformatted hard drive. IBM PC-DOS 3.10 does not have a low level formatter because IBM's hard drive computers are shipped with the hard drive already formatted.

After starting **LLFDFMT**, simply follow the prompts to completion. When the hard drive is formatted, re-boot the computer using IBM PC-DOS 3.10.

3. After reaching the "A>" prompt, type: **FDISK <ENTER>**

FDISK.COM partitions the hard drive for use by PC-DOS. Follow the prompts to completion. After the hard disk is partitioned, re-boot the system with IBM PC-DOS 3.10.

EDITOR'S NOTE: This information has not been verified by Computer Customer Service.

(S OSBORN, 01-0065)

TANDY 3000 (25-4001) - SERIAL/PARALLEL ADAPTER (25-4034)

There seems to be some confusion about the Serial/Parallel Adapter on the Tandy 3000. The DB-9 connector (9 pin) on the top of the card is a serial connector for communications (such as modems using the RS-232 protocol). The DB-25 connector below is the parallel 25 pin jack for printers using the Centronics protocol.

As shown in the diagram (next page), jumpers E6-E7 configure the parallel port to LPT1, E5-E6 configure the port to LPT2. When E9-E10 are jumpered the serial port is configured to COM1 and E8-E9 to COM2.

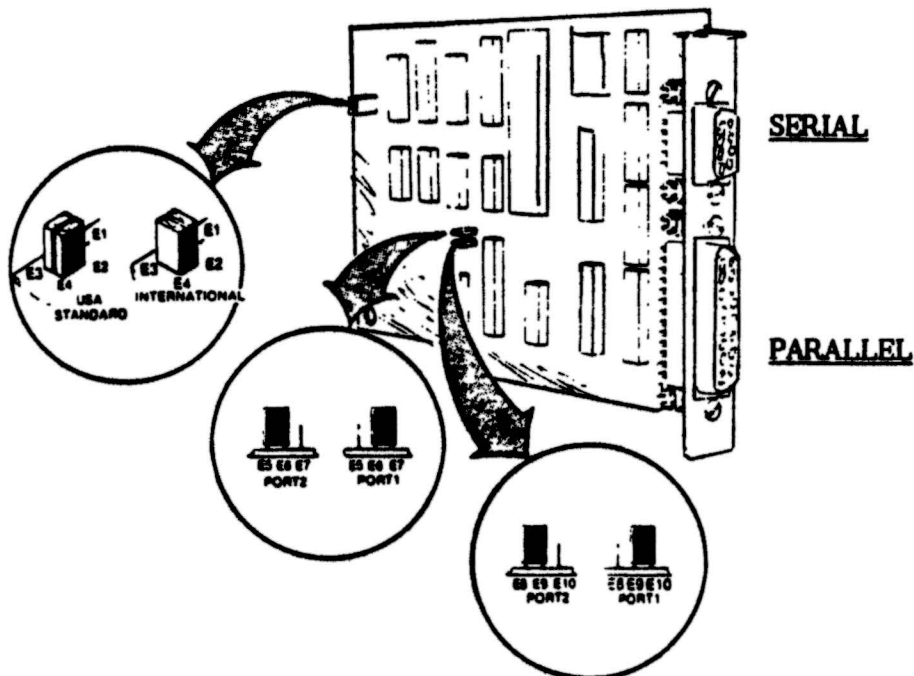

The confusion seems to be that users think the DB-9 serial jack is designed for serial printing, while it is actually designed for serial communications. The DB-9 to DB-25 Adapter Cable (26-1399) when used with a Null Modem Adapter (26-1496) will work with serial printing.

(continued)

TANDY 3000 (25-4001) - SERIAL/PARALLEL ADAPTER (25-4034) (continued)

Remember, Radio Shack printers which have serial ports are designed to be Color Computer compatible and do not necessarily work as true serial printers. The Tandy 3000 offers industry-standard parallel printing capability. This does not prohibit using a serial printer; however, the user will have to be prepared to spend additional time to make the configuration work.

(D. SWEIGERT, 01-7879)

700-SERIES INFORMATION

The following is a list of current and future 700 numbers for Computer Software corrections, addendums, revisions, and enhancements for the Color Computers, Tandy 200/Model 100, Models 4/III/I, Tandy 6000/Models 16/12/II, and MS-DOS Computers.

EDITOR'S NOTE: These products are listed by 26-series number.
